Confirmation of Training Activities

With this letter, we confirm that Mrs. Kholiavchuk has trained her abilities to use atmospheric model data for climatic analysis, has visited field sites to learn about measurement and data management methods and has joined scientific events, namely the International Mountain Conference 2022 (www.imc2022.info). We estimate the overall time required for the activities including independent learning and rework of the contents to be equivalent to around 150 hours or 6 ECTS.

With best regards,

Prof. Stefan Mayr (Head of research area)
